

SAIM WAJID

Karachi, Pakistan — Open to Relocation (Glasgow / Edinburgh / Dublin) or Remote

Work Authorisation: Will require visa sponsorship (UK Skilled Worker Visa / Irish Critical Skills Employment Permit)

saimwajid11@gmail.com | +92 332 2652400 | [linkedin.com/in/saimwajid11](https://www.linkedin.com/in/saimwajid11) | github.com/Rexced

PROFESSIONAL PROFILE

Recent Computer Science graduate (IBA Karachi) with hands-on experience across cloud infrastructure (Azure, AWS, Oracle Cloud), security operations, and applied AI/automation — including integrating LLM APIs into production-style systems. Comfortable working end-to-end: provisioning cloud infrastructure, containerizing services, and securing them with SIEM-driven monitoring. Brings a SOC internship background suited to security- and compliance-conscious environments, plus a track record of independently building and shipping infrastructure projects. Seeking an entry-level Software, Cloud, or DevOps Engineering role in Glasgow, Edinburgh, or Dublin, open to relocating or working remotely.

TECHNICAL SKILLS

Cloud & Infrastructure: Azure, AWS, Oracle Cloud (OCI), Docker, NGINX, Linux server administration, Tailscale VPN, Twingate

Cybersecurity: Wazuh SIEM, STIX/TAXII threat intelligence, MITRE ATT&CK, DLP policies, iptables, secure coding practices

AI & Automation: Gemini API integration, Gemini CLI, Claude Code, prompt engineering, n8n workflow automation

Languages & Frameworks: Python, Java, C++, JavaScript, SQL, FastAPI, React, REST APIs

Tools: Git, VS Code, AntiGravity

TECHNICAL PROJECTS

SIEM Threat Intelligence Pipeline (Final Year Project)

Jun 2026

FastAPI, React, Wazuh, Gemini API, MITRE ATT&CK

github.com/Rexced

- Wazuh SIEM lacked automated external threat-intel enrichment, slowing analyst triage — built an API-first, containerised platform integrating Wazuh with automated STIX/TAXII ingestion to close that gap.
- Integrated a Gemini-powered assistant that turns enriched alert context into natural-language threat explanations, and built a bidirectional correlation engine mapping indicators to 18 tracked MITRE ATT&CK techniques.
- Result: cut threat-detection time by 65%, giving SOC analysts faster, plain-language context on live alerts.

Self-Hosted Oracle Cloud Server for 24/7 Uptime

Jul 2026

Oracle Cloud, n8n, Docker, Tailscale, NGINX

github.com/Rexced

- Needed a reliable, zero-cost way to keep a personal automation service running continuously — engineered a trigger-based n8n pipeline that extracts financial data from Notion, generates visualisations locally, and writes results back with low latency.
- Set up Tailscale VPN for encrypted remote access with no domain or public HTTPS endpoint required, and deployed an NGINX reverse proxy with custom iptables rules to isolate internal Docker containers.
- Result: fully automated, continuously available service at zero recurring hosting cost.

Home Lab: Self-Hosted Services & SIEM

Jun 2025

Docker, Wazuh, Pi-hole, Immich, Jellyfin

github.com/Rexced

- Repurposed an old laptop into a headless Ubuntu server to host internal services, securing access with Twingate zero-trust VPN and Tailscale rather than exposing anything publicly.
- Deployed Wazuh SIEM to centralise security logs and monitor connected devices, and Pi-hole as a network-wide DNS sinkhole; tuned custom routing for low-latency LAN gaming.
- Result: replaced paid cloud photo storage and streaming with self-hosted Immich and Jellyfin, cutting recurring cost to zero.

Legacy Hardware Optimisation via BIOS Modding

Mar 2025

UEFI Tool, Re-BAR patching

- A 14-year-old CPU/GPU pairing didn't officially support Re-BAR — patched and flashed a legacy motherboard's BIOS to unlock it anyway, bypassing factory limitations for modern PCIe memory access.
- Result: improved GPU performance by 5–15% on hardware the manufacturer had left behind.

PROFESSIONAL EXPERIENCE

Information Security Intern — Systems Ltd

Karachi, Pakistan

SOC / Cloud Security

Jun 2025 – Aug 2025

- Implemented cybersecurity frameworks and compliance controls tailored to environment-specific needs, reducing measured vulnerability exposure by 25%.
- Supported SIEM enterprise integration within a live SOC, analysing flagged phishing attempts and malware fingerprints as part of incident triage.
- Configured test cloud environments to apply foundational cloud security and data-loss-prevention (DLP) principles in practice.

EDUCATION

Bachelor of Science, Computer Science — IBA Karachi

Karachi, Pakistan

CGPA: 3.05 / 4.0

Aug 2022 – Jun 2026

CERTIFICATIONS

- NVIDIA — Accelerated Computing with CUDA C++ & Python
- Boot.dev — Learn Python for Beginners
- Boot.dev — Learn Git
- Boot.dev — Learn Docker

ADDITIONAL INFORMATION

Interests: Linux systems, home-lab infrastructure, and system design and exploration.
