Education

Institute Of Business Administration (IBA), Karachi

August. 2022 – June 2026

Bachelor of Science in Computer Science — CGPA : 3.05

Karachi, Pakistan

Experiences

Systems Ltd

June 2025 – August 2025

Information Security Intern

Karachi, Pakistan

- Learned and implemented cyber-security frameworks and compliance standards based on specific environmental needs, decreasing Vulnerability by 25%.
- Gained practical experience with SIEM enterprise integration and navigated high-stakes SOC operations by analyzing flagged real world phishing attempts and malicious malware fingerprints.
- Configured testing ready cloud environments to develop a hands on understanding of foundational cloud security principles and DLP policies.

Projects

Oracle server for 24/7 service uptime | *Oracle Cloud, n8n, Docker, Tailscale*

July 2026

- Self-Engineered a trigger based automated n8n pipeline, extracting financial records stored in a Notion database, generate data visualizations locally, and push the updated charts back to the private Notion database under minimal latency.
- Established a secure remote access solution using Tailscale VPN, creating a private encrypted tunnel for secure personal access over the internet without HTTPS or domain, cutting down cost to zero .
- Implemented an NGINX reverse proxy alongside custom iptables configurations to protect internal Docker containers and route network traffic securely.

Home Lab | *Docker, SIEM, CyberSec, Media server, DNS, Blob storage*

June 2025

- Repurposed a old laptop to a headless Ubuntu Server instance, hosting diverse internal applications, securing remote administrative access and service connectivity through a Twingate zero-trust VPN and Tailscale.
- Configured Pi-hole as a network-wide DNS sinkhole to block advertisements and malicious traffic, alongside managing custom network routing for low-latency multiplayer LAN servers.
- Provisioned private data management and streaming platforms by deploying Immich for local, scalable photo storage and Jellyfin as a high-performance media server, replacing google photos and Netflix and cutting it's cost down to 0.

Hardware Optimization via BIOS Modding | *UEFI Tool, Re-bar*

March 2025

- Modified a legacy motherboard's BIOS to enable Re-BAR for an unsupported Intel i7-3770 and RX 6600 setup.
- Bypassed factory limitations to unlock modern PCIe memory access on 14-year-old hardware architecture.
- Optimized Windows 10 system performance by successfully patching and flashing custom BIOS firmware, improving GPU demanding by 5% to 15%.

FYP: SIEM STIX/TAXII Pipeline Integration | *FastAPI, React, Wazuh, REST API, Gemini API*

June 2026

- Developed an API-first, containerized platform bridging the open-source Wazuh SIEM with automated STIX/TAXII threat intelligence ingestion, resulting in faster threat detection by 65%.
- Integrated a Gemini AI analyst assistant to provide natural-language threat explanations based on enriched alert context for quicker high-level understanding for the SOC analyst
- Developed a bidirectional MITRE ATT&CK correlation engine that automatically maps threat indicators to 18 tracked adversarial techniques.

Technical Skills

Languages: Python, Java, C++, Java Script, SQL

Developer Tools: VS Code, AntiGravity, Azure, AWS, Oracle Cloud, Docker, Git, Gemini CLI, N8N, Claude code

Interests: Linux, technical , home labs, system design and exploration

Certifications

NVIDIA Accelerated Computing (CUDA C++ & Python): Learned to optimized standard CPU operations into parallel GPU threads to build high-performance applications in C++ and Python.

Boot.dev: Learn Python: Built a strong foundation in core programming concepts and data structures through the "Learn Python for Beginners" curriculum

Boot.dev: Learn Git: Solidified essential version control skills, including branching, merging, and repository management, via hands on practice.

Boot.dev: Learn Docker: Learned hands on the basics of docker, containerization, docker managements, volume management, Container execution, container networking, image building, container debugging and more
