PROFESSIONAL SUMMARY

Cloud & DevOps-focused engineer with hands-on experience across Azure, AWS, and Oracle Cloud, containerization, and security operations from a SOC internship and independent infrastructure projects. Builds and automates self-hosted and cloud-based systems end-to-end — provisioning, networking, monitoring, securing. Seeking a remote Cloud/DevOps or Cloud Security role with a US-based team, including Texas's cloud and energy-sector tech hubs, with US business-hours overlap.

TECHNICAL SKILLS

Cloud & Infrastructure: Azure, AWS, Oracle Cloud (OCI), Docker, NGINX, Tailscale VPN, Twingate, Linux server administration

Security & Automation: Wazuh SIEM, DLP policies, iptables, Pi-hole, STIX/TAXII Threat Intelligence, MITRE ATT&CK, n8n workflow automation

Languages & Frameworks: Python, Java, C++, JavaScript, SQL, FastAPI, React, REST APIs

Tools: Git, VS Code, Gemini CLI, Claude Code, AntiGravity

PROFESSIONAL EXPERIENCE

Information Security Intern — Systems Ltd

Karachi, Pakistan

SOC / Cloud Security

June 2025 – August 2025

- Implemented cybersecurity frameworks and compliance controls tailored to environment-specific needs, reducing measured vulnerability exposure by 25%.
- Supported SIEM enterprise integration within a live SOC, analyzing flagged phishing attempts and malware fingerprints as part of incident triage.
- Configured test cloud environments to apply foundational cloud security and DLP principles in practice.

PROJECTS

SIEM Threat Intelligence Pipeline (Final Year Project)

June 2026

FastAPI, React, Wazuh, REST API, Gemini API, MITRE ATT&CK

- Built an API-first, containerized platform integrating open-source Wazuh SIEM with automated STIX/TAXII threat intelligence ingestion, cutting threat-detection time by 65%.
- Added a Gemini-powered assistant that generates natural-language threat explanations from enriched alert context for faster analyst triage.
- Built a bidirectional correlation engine mapping threat indicators to 18 tracked MITRE ATT&CK techniques.

Self-Hosted Oracle Cloud Server for 24/7 Uptime

July 2026

Oracle Cloud, n8n, Docker, Tailscale, NGINX

- Engineered a trigger-based n8n pipeline that extracts financial data from Notion, generates visualizations locally, and writes results back with low latency.
- Set up Tailscale VPN for encrypted remote access without a domain or public HTTPS endpoint, eliminating hosting cost.
- Deployed an NGINX reverse proxy with custom iptables rules to isolate and secure internal Docker containers.

Home Lab: Self-Hosted Services & SIEM

June 2025

Docker, Wazuh, Pi-hole, Immich, Jellyfin, Zero-Trust VPN

- Converted a repurposed laptop into a headless Ubuntu server hosting multiple internal services, secured with Twingate zero-trust VPN and Tailscale.
- Deployed Wazuh SIEM to centralize security logs and monitor connected devices, and Pi-hole as a network-wide DNS sinkhole.
- Replaced paid cloud photo storage and streaming with self-hosted Immich and Jellyfin, and tuned routing for low-latency LAN gaming — cutting recurring cost to zero.

Legacy Hardware Optimization via BIOS Modding

March 2025

UEFI Tool, Re-BAR patching

- Patched and flashed a legacy motherboard's BIOS to enable Re-BAR on an unsupported CPU/GPU pairing, improving GPU performance 5–15% on 14-year-old hardware.

EDUCATION

Bachelor of Science, Computer Science — IBA Karachi

Karachi, Pakistan

GPA: 3.05 / 4.0

August 2022 – June 2026

CERTIFICATIONS

- NVIDIA — Accelerated Computing with CUDA C++ & Python
- Boot.dev — Learn Python for Beginners
- Boot.dev — Learn Git
- Boot.dev — Learn Docker
